**PRODUCT DATA SHEET**

**GlassCoat – SP300**

Glass Flake Polyester

---

**GENERIC TYPE:**
2 pack Glass Flake Polyester

**DESCRIPTION:**
GlassCoat-SP300 is a spray applied system containing many compacted layers of glass flake, which gives a film which is very resistant in aggressive environments for protecting steel. GlassCoat-SP300 contains glass flake reinforcement and provides a tough, chemical resistant, flexible coating that is ideally suited for aggressive water service (salt, brackish). Enhanced by multi functional chemistry, GlassCoat-SP300 is suited for acid and caustic service, and is excellent in water environments.

**FEATURES:**
- Excellent abrasion resistance
- Excellent impact resistance
- Excellent long term protection
- Excellent resistance to hypochlorites and free chlorine
- Outstanding impermeability
- Single coat, self-priming capabilities
- VOC compliant to current EPA 1990 PG6/23(97).

**RECOMMENDED USES:**
GlassCoat-SP300 is a versatile coating that provides an impenetrable film for severe exposures in marine, offshore, petrochemical, pulp & paper and other aggressive environments. It is particularly recommended where there is heavy mechanical wear such as on helipads, splash zones, quays, ship decks etc. It is used on ship hull exteriors and to protect splash zone areas on offshore structures.

- Trenches
- Containment Vessels and Dikes
- Tank Linings
- Process area surfaces.

**NOT RECOMMENDED FOR:**
Not recommended for immersion service in alkalis or aromatic solvents. Not suitable for use on concrete.

**SUBSTRATES:**
Apply to properly prepared steel or others as recommended.

---

APPLICATION INSTRUCTIONS

These instructions are not intended to show product recommendations for specific service. They are issued as an aid in determining correct surface preparation, mixing instructions, and application procedure. It is assumed that the proper product recommendations have been made. These instructions should be followed closely to obtain the maximum service from the materials.

Substrates & Surface Preparation

General
Surfaces must be clean and dry. Employ adequate methods to remove dirt, dust, oil and all other contaminants that could interfere with adhesion of the coating.

Steel
• Immersion: SIS-Sa3 (SSPC-SP5)
• Non-Immersion: SIS-Sa2 (SSPCSP10)
Surface Profile: 75 - 100 mm

Spray Application (General)
The following spray equipment has been found suitable and is available from manufacturers such as Binks, DeVilbiss and Graco.

Airless Spray
• Pump Ratio: 45:1 (min.)
• Volume Output: 11.5 l/min (min.) (2.5 gpm min.)
• Material Hose: 12.5mm (min.) (0.5” I.D. min.)
• Tip Size: 0.89-1.14mm (0.035 - 0.045”)
• Output Pressure: 155-176 kg/cm² (2200-2500 psi)

Brush & Roller
Not recommended, but may be used for small areas.

Mixing
Power mix GlassCoat-SP300 Part A separately, then add Catalyst and Accelerator in accordance with table below. CAUTION. KEEP CATALYST AND ACCELERATOR SEPARATE, DO NOT MIX TOGETHER.

GlassCoat-SP300 P/A
5 Gallon Kit.
GlassCoat-SP300 P/B
14 fl oz

Ratio
Dependent on temperature. See table below.

Thinning
Not normally required. However 7% of SolvenSany # 278 may be used to reduce the viscosity. Use of thinners other than those supplied or recommended by SanyChem may adversely affect product performance and void product warranty, whether expressed or implied.

Pot Life
Dependent on mixing ratio and temperature. See table below. Pot life ends when coating starts to generate heat or builds viscosity. Pot life times will be less at higher temperatures.

The second coat should be applied while the first coat is still tacky.

Final Cure: Before placing into service.

Surface Temperature
13 °C N/R
24 °C 14 Days
32 °C 07 Days
55 °C 24 Hrs

Repair Procedure: In areas where the coating has been damaged or removed from the substrate, the following procedure must be used.

• Clean and roughen the substrate in the manner specified for the original application, or in cases where the substrate has not been exposed, remove the loose or damaged material to sound, tightly adhered material.

• Grind to featheredge existing, sound, tightly adhering material and overlap area.

• Solvent wipe edges and any overlap areas with SolvenSany # 260 and apply repair material in one or two coats as specified.

Cleanup & Safety

Cleanup
Use SolvenSany # 252. In case of spillage, absorb and dispose of in accordance with local applicable regulations.

Safety
Read and follow all caution statements on this product data sheet and on the MSDS for this product. Employ normal workmanlike safety precautions. Hypersensitive persons should wear protective clothing, gloves and use protective cream on face, hands and all exposed areas. Personal protective equipment meeting the requirements of the COSHH regulations should be worn.

Ventilation
When used as a tank lining or in enclosed areas, thorough air circulation must be used during and after application until the coating is cured. The ventilation system should be capable of preventing the solvent vapour (Styrene) concentration from reaching the lower explosion limit for the solvents used. In addition to ensuring proper ventilation, appropriate respirators must be used by all application personnel. Appropriate Working in Confined Spaces Regulations should be followed.

Caution
This product exotherms at the end of its pot life. Any unused quantities will become extremely hot and will generate smoke and fumes. STORE AND KEEP CATALYST AND ACCELERATOR SEPARATE, DO NOT MIX TOGETHER AS COMBUSTION WILL OCCUR.

FOR INDUSTRIAL USE ONLY. KEEP AWAY FROM CHILDREN. 1/2001
