Guest® Industrial Battery Chargers & Accessories
Maximize Battery Life With Guest’s 3-Stage Chargers

More batteries are ruined by improper charging than by over-use. The safest, most efficient way to charge your batteries without making them too hot or boiling off electrolyte is in 3 distinct stages:

In the bulk stage, the charger uses its full amp output to do the heaviest charging, quickly bringing your battery to about 75% of capacity.

In the absorption stage current flow slows, adjusting for maximum charging efficiency while it gently tops off the battery to about 98% of capacity. Maintaining constant voltage lets the battery absorb the charge at its own rate.

The float or maintenance stage applies a lower, closely-regulated, constant voltage to maintain full charge and prevent discharge. Unlike some “trickle chargers,” Guest’s float charger won’t apply more current than necessary to maintain full charge.

Batteries can be connected indefinitely, without harm; in fact, the float charge extends battery life.

Special Charger Settings

Guest will fine-tune any or all of the 3-stage charging electrical outputs to meet the specific requirements of systems designers and/or battery manufacturers.

A Guest Exclusive: Multi-Task Charging (MTC)

In multi-battery applications, the needs of the individual batteries vary widely. A “starting” battery, replenished by the alternator, requires a different kind of charge than a deeply-depleted “constant-use” battery.

Guest’s exclusive multiple-converter models include separate chargers for both starting and constant-use batteries, within the same housing. Each converter automatically delivers the power necessary to optimize each battery’s recharge cycle.

Guest’s MTC chargers have:

• Dedicated cables for each battery, so each battery can receive individual attention.
• Differentiated amperages to each battery depending on its usage curve.
• Robust circuits designed for continuous use as a power supply.

Samples of Multi-Task Charging Configurations:

12 volt (parallel) 24 volt (series) 36 volt (series) 12v/24v-12
Poor Power Quality? Harsh Conditions? Rough Handling? We Love Them!

The original Guest chargers were designed for marine conditions, meaning: poor dockside power quality; exposure to extreme weather; and very rough handling. Our epoxy-potted cases are the ultimate in durability, completely waterproof and able to withstand numerous caustic chemicals and gases, as well as being shockproof. All of our 115V chargers can handle input power fluctuating from 95-130vAC and between 50-60Hz.

Our 3-stage chargers are also lighter than transformer types, completely silent, and still provide full output when over-loaded outlets drop AC input below the normal 115 volts. All Guest chargers have a full 1-year warranty.

Standard Models, Options & Specials

Guest offers over 30 standard charger models. Virtually any of our standard on-board chargers can come with options, such as custom output cable lengths and terminals, without incurring any additional engineering costs.

Special Charger Design: At OEM quantities, Guest can work with your specific application needs to develop specialized, industrial duty chargers.

Output Cables: 2 sets, 6’ long
DC Terminations: Ring Terminals
No. of Batteries: 2 in 12V or 24V configuration

2631-230 (Bulk Pack, CE)
Input Voltage: 230AC
Output Voltage: 12V, 24V or 36V
DC Amperage: 30A@12V (10A/10A/10A)
Output Cables: 3 sets, 6’ long
DC Terminations: Ring Terminals
No. of Batteries: 3

2631-230 (Bulk Pack)
Input Voltage: 230AC
Output Voltage: 12V, 24V or 36V
DC Amperage: 30A@12V (10A/10A/10A)
Output Cables: 3 sets, 6’ long
DC Terminations: Ring Terminals
No. of Batteries: 3
Compact Models For Small Charging Jobs

2603
NEW! Battery Pal Magnum™ protects sophisticated electronics in a potting compound that is waterproof and shockproof. The Battery Pal can be used for charging or maintaining flooded or gel cell batteries rated between 5 and 250 amp.

2602A-24
2 amp, 24 volt charger, pre-wired with 6’ AC cord and 4’ DC cord with ring terminals. Fully automatic with 3-stage “smart” switching. Built-in electronic overload protection, thermal protection and reverse polarity protected. Suitable for portable, on-board, or wall-mounted applications.

2602A-12
2 amp, 12 volt charger, pre-wired with 6’ AC cord and 4’ DC cord with ring terminals. Fully automatic with 3-stage “smart” switching. Built-in electronic overload protection, thermal protection and reverse polarity protected. Suitable for portable, on-board, or wall-mounted applications.

26015-24
NEW! Only 1.5 pounds yet capable of charging two batteries at once (in series). Only 5-5/16” x 2-5/8” x 1-7/16” in size. 24 volts, 1.25 amps. cUL.

2903-1-24
A two-battery charger featuring 3-pin AMP® connectors. 24 volt, 3 amp. One set of 8’ long output cables.

ConnectCharge™ Inlets
Installing A Guest® Battery Charger Just Got 15 Times Faster

Exclusive molded tab
Inlet locking latch

Eliminates cutting off the AC plug, purchasing an inlet, and the labor required to wire the AC cord to the inlet. Using its patent pending molded locking notch, the ConnectCharge™ battery charger plug simply snaps into the locking tab on the back of either of Guest’s ConnectCharge inlets. No extra labor necessary.

Front Mount Inlet Sleeve
Mounts to panel with two screws.

Part Number Description
150CCI Inlet Sleeve with threads and threaded locking ring as well as front mount option using screws; with PVC flap
150GCTM Inlet Sleeve, thread mount with threaded locking ring, with spring-loaded flip lid

All the above come in individual packaging.

Part Number Description
150CC.OEM Inlet Sleeve, front mount, using screws, with PVC flap
150CC.TM.OEM Inlet Sleeve, thread mount with threaded locking ring, with PVC flap
150GCA.OEM Inlet Sleeve, front mount using screws, with spring-loaded flip lid
150GCTM.OEM Inlet Sleeve, thread mount with threaded locking ring, with spring-loaded flip lid

All the above come in 50/carton .OEM pack.

ConnectCharge plug has an exclusive molded locking detent that locks into the ConnectCharge inlet for a secure connection.
Guest® Battery Switches

Industrial Series Universal Mount Switches
Impact-resistant molded cases made from durable polycarbonate. Feature full 360° selection and a clean, high-tech look. Rated at 230A continuous, 345A intermittent. Measures 5" diameter x 2-3/4" deep. Cable lug size: 3/8". Models 2113, 2114 and 2115 are rated at 200A continuous and 1000A intermittent.

*AFD= Alternator Field Disconnect

Industrial Series
Full 360° selection and tough polycarbonate cases provide years of reliable service. Rated at 230A continuous, 345A intermittent. Measures 5-1/2" dia. x 2-5/8" deep. Selector switches allow selection of either battery, both batteries in parallel, or complete disconnect of both batteries. ON/OFF switch permits battery to be shut off near sources. Cable lug size: 3/8".

*AFD= Alternator Field Disconnect

Heavy-Duty Diesel Series
Tough, glass-filled polycarbonate cases and high amp ratings for heavy wear. Rated at 360A continuous, 600A intermittent. Measures 5-1/2" square x 3-1/2" deep. Selector switches allow selection of either battery, both batteries in parallel, or complete disconnect of both batteries. ON/OFF switch is rated at 450 amps continuous, 800 amps intermittent. All switches feature alternator field disconnect (AFD). Cable lug size: 1/2".

To select the proper battery switch size, make sure your engine’s cold cranking amperage is lower than the intermittent rating of the switch. When using switches with alternators with internal voltage regulators, be sure to choose a switch without alternator field disconnect (AFD).
15 Amp Inlets & Outlets

Perma-Lock™ terminals do not loosen after numerous heat cycles and vibration. Flanged house designed for mounting into panel without needing access from the rear. All nylon construction for durability.

15A/125V

- Straight Blade: Model 5278
- Straight Blade: Model 5279
- Locking Blade: Model 4716
- Locking Blade: Model 4715

**Dust Resistant Inlets & Outlets**

Marinco DRI and DRO Series for 15/20 Amp straight blade and 15 Amp locking. Hinged cover, dust boot, extra gasket and sealed interior provide protection from harsh, dirty industrial environments.

**WP1: A New, Improved Flip Lid**

WP1 covers and protects either inlets or outlets from dust or damage. Creates raintight seal when not in use. Applications include power supplies to vehicles or machinery, as well as power take-offs from vehicles or machinery.

**12VTR: Battery Direct Connect**

Multi Connection Battery Terminals

- Terminate up to four electronic instruments on each set of terminals
- Comes complete with quick-connect terminals
- Positive is molded in red, negative is molded in black
- No tools necessary
- All one piece, no screws or parts to lose
- Cover snaps tight when closed

**ConnectPro® Heavy-Duty 12V Plug & Receptacle For Maximum Power**

Superior receptacle current-carrying capacity eliminates connection problems that rob power and reduce battery life. Exclusive features include:

- Marine-grade turn-locking connection
- Weather-resistant seals and covers safeguard electrical contacts from water and corrosion
- Universal design works with 12, 24, 12/24, 24/36, and 36V systems
- Accepts up to 8 gauge wire
- Works for any 2- or 3-wire system
- Plated brass electrical contacts protect from power-robbing corrosion
- Perma-Lock™ terminals with special screw-locking connections; vibration and heat cycling cannot loosen
- Plug: 12VBP; Receptacle: 12VBR
