

F.D. Roosevelt
President of the United States
White House
Washington, D.C.

President Franklin. D. Roosevelt,

Some recent work of scientists such as E. Fermi and L. Szilard have been experimenting with the element known as Uranium and which leads me to seeing potential in this experimentation and using this in the later war and future. Also due to the scientists, E. Fermi and L. Szilard, work on a nuclear chain reaction by large amount of the element uranium. So as a result of all of this experimentation I bring matters and attention to you.

After being prompted by the Japanese to wage war with them, we are now being in endless bombing sessions and I believe that this chain reaction created with vast amounts of uranium could end this war very soon in the immediate future.

While U.S might have poor quantities in uranium and such, there is more in Canada and alongside where Czechoslovakia used to be. There also is vast amounts of ore in the Belgian Congo.

At this point you might want to keep in contact of what we are doing and know what further development is happening at the research, So I recommend that you should send an assistant that has your trust and while then these options can be given to your trustworthy assistant of your's:

- 1.) Temporarily stay at the worksite and report back to the government and also give protection needed for a steady supply of uranium deposits by the government.
- 2.) Supporting us with funds to speed up the exhibition, if only funds were to be needed by the government if needed. Also if the study's and scientists need any further support needed by the government, such as equipment and permission on certain sites, you'r assistant can notify the government for any actions.

I understand that these tasks and recommendations are up to a challenge for you but if you are willing to support us all the way through the project, you won't end up regretting it, again think about it and notify us if you decide to accept this.

Sincerely,

A handwritten signature in cursive script that reads "A. Einstein".
