Dear Reader,

Well hello, you must be wondering why we are behind a highly surveilled area. Could it be I'm in jail, no not at all actually, I'm being protected and to be sure there are no spy running around spreading information on the "Manhattan project" we are to scanned and live in this surveilled area until the project is done and the atom bomb has been tested to where it'll secure victory of World War II. But here we have a website that has been created to store all the information of our study's on this website.

The "Manhattan project" was a secretive project that was conducted by Albert Einstein and some of other colleagues such as myself Fuchs Klaus and Szilard, it was the site to create the atomic bomb. At this time the U.S had to hold their experimentations in secret otherwise spy's such as spy's from germany would steal all the information and if that were to happen other countries would have dropped the atom bomb on us. In this website you will learn what it was to be in the time period of World War II and a very brief explanation of how the atom bomb works and developed, along with little information on World War II and an invitation from Einstein to president Franklin Roosevelt requesting to start the "Manhattan Project". Well I hope you will take in much information and knowledge of the atom bomb from this Website that I had created to share my studies with other colleagues.

Sincerely

J. Robert Oppenheimer
