X-RAY CONSULTATION REPORT

NAME	SING KIO	SEX		AGE	X 38	ROOM/WARD	/	OPD.	
REFERRED BY	DR. R. NGO	2-45492						ADMISSION NO.	

CLINICAL DATA:

CHEST

Compared with the previous examination dated 12-10-91 shows marked interval decrease in the size of the atelectatic segment previously noted along the left paracardiac area.

The rest of the lungs remain clear except for some pulmonary scarring in the left apex.

The heart is not enlarged.

Costophrenic angles are well-defined.
