X-RAY CONSULTATION REPORT

NAME SING KIO	SEX	AGE 38	ROOM/WARD	OPD.
REFERRED BY DR. R. NGO	DATE	ADMISSION NO. 12-10-91		

CLINICAL DATA:

CHEST

Compared with the previous examination taken outside dated 11-11-91 shows interval progression of the atelectasis and infiltrates in the left lung base. The right lung is clear.

Heart is not enlarged. Diaphragm is intact.

IMPRESSION:

Atelectasis and pneumonia infiltrates, left lung base showing interval progression. Possibility of this being secondary to hilar compression cannot be ruled out.
