This manual describes the use of the *Start Clipper* Plug-in for thinkDB™ 2.0. For more information on thinkDB 2.0 and other thinkDB Plug-ins, please visit <http://www.thinkingbytes.com>. For information on additional thinkDB Plug-ins created by PDA Bytes, please visit <http://www.pdabytes.com>.

1. **thinkDB Plug-in Overview**
2. ***Start Clipper* Overview**
3. **Installation**
4. **Uninstalling**
5. **Usage Overview**
 - a. Configuring Plug-in fields
 - b. Running the Plug-in
6. **Optional uses**

1. thinkDB Plug-in Overview

A thinkDB Plug-in is simply an add-on program that fills a specific purpose in thinkDB. As such, they extend the functionality of thinkDB. For example, there is currently (as of thinkDB 2.0) no means to concatenate 2 Text fields together. If you have a tinyByte™ with a FirstName Text field and a LastName Text field, there is no facility for joining them together (concatenation) and having them appear as one field of "FirstName LastName" (or "LastName, FirstName"). A Plug-in can fill this void.

2. *Start Clipper* Overview

The purpose of the *Start Clipper* Plug-in is to simply start the Clipper application with a given URL.

3. Installation

There are a couple of ways to install a thinkDB Plug-in (or any Palm OS application):

- a. Double-click the .prc file to be installed.
- b. Select Install from within Palm Desktop and choose the .prc file.

In both cases, the Palm™ Install Tool will then present a dialog to continue installation. After doing a HotSync®, the Plug-in will be installed into thinkDB and is ready for use. To verify that it was installed correctly, launch thinkDB on your handheld, choose Tools/Plug-in Manager from the application menu. Tap the arrow beside "Plug-In:" and you should see the Plug-in listed. If not, repeat install instructions. If you do see it listed, it has been installed.

4. Un-installing

To remove a Plug-in from thinkDB, first remove the Plug-in from all fields in all your tinyBytes. If you do not, you will encounter problems and could potentially corrupt data. Once you have removed all references of it from your tinyBytes, choose Tools/Plug-in Manager from the thinkDB application menu. Tap the arrow beside "Plug-In:", tap on the Plug-in you wish to remove, then tap the "Delete..." button.

5. Usage Overview

Before configuring any Plug-in, you must first create the fields that the Plug-in requires for both input and output. The input for this Plug-in is 1 text/memo fields. There are no output fields. (Descriptions of the input field follows.) After creating this fields, continue with the instructions for configuring the Plug-in to utilize these fields.

a. Configuring Plug-in fields:

1. From the Field Editor, select Field Type ThinkDB Plug-in from the Field Type list. Selecting the small box to the right will then open the Field Properties dialog.
2. From the Plug-in list, select *Start Clipper*. One fields will appear, "URL".
3. Selecting "URL" will allow you to choose a Text (or Memo) field to use as the URL with which to start Clipper.

b. Running the Plug-in:

There are 2 methods for having any Plug-in perform its duties:

1. Place the "plugged-in" field onto a form and tap it.
2. "Apply" the Plug-in from the "Filtered Operations" screen (which is one of the menu options that appears by tapping on the "tool" icon).
