

# SUPER SPEED

**HI-TECH ANTI-FOULING  
..... INSPIRED BY  
MOTHER NATURE**

## FEATURES :

- One Pack Anti-Fouling Coating.
- Advanced Catalytic Conversion Technology.
- Mimics Fish Skin On Contact With Water.
- Sheds Marine Growth Through Movement.
- Increases Speed Efficiency.
- Highly Slippery. Low Surface Resistance.
- Savings In Time, Fuel & Maintenance.
- TBT Free. Environment Friendly.
- Suits Vessels Affected By TBT Legislation.

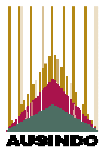

MANUFACTURED FOR

**S\*TECHNO INTERNATIONAL PTE LTD**

[www.s-techno.com](http://www.s-techno.com)

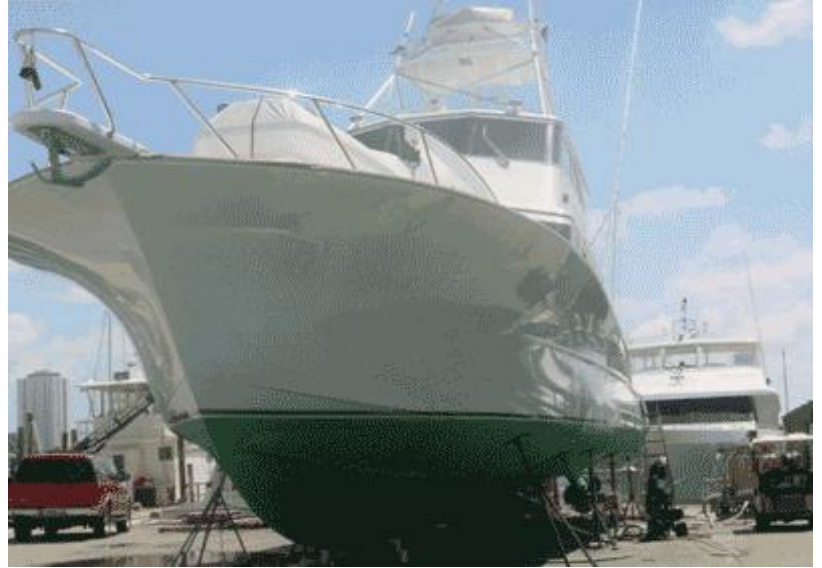

REGIONAL DISTRIBUTOR SOUTH EAST ASIA

**AUSINDO IMPEX (S) PTE LTD**

AUTHORISED AGENT / DEALER

SuperSpeed SP 33 is a completely unique new approach to anti-foul paint. Using inspiration of Mother Nature, SuperSpeed SP 33 mimics a fish's skin to create a smooth foul shedding surface. With this unique and new development in anti-foul technology, there is no complex array of topcoats to choose from; just one topcoat works for all boats. SuperSpeed SP 33 works on virtually all substrates and on every type of vessel or boats, from ice-breaker to sports fisher, sailboat to performance racer, cruise ship to tug boat.

Mother Nature provided the inspiration for SuperSpeed SP 33. Following a simple observation that despite spending 100% of the time in water, fish and many vertebrates are not prone to fouling with weed and other undesirables.

These observations lead to the development of SuperSpeed SP 33. Developed to mimic the skin of a living creature by catalytically developing a micro-film of a highly slippery substance, like a layer of mucus, when immersed in water. Although barely detectible to human touch, the surface is very difficult for the average algae or barnacle to cling to. This layer does not erode but behaves and reacts like a bar of soap. The film sheds marine growth as soon as the vessel moves through the water, leaving the hull clean and efficient.

SuperSpeed SP 33 relies on Mother Nature rather than heavy loadings of biologically active ingredients making it great for environment protection. SuperSpeed SP 33 is TBT free and is fast drying. It is hard in only 30 minutes and it works only when it comes into contact with water. It will not deteriorate when left out of the water.

Superspeed SP 33 is proven to save fuel, time and maintenance. Join those satisfied customers who have seen improvements in anti-fouling, performance enhancement (up to 20% speed increments), fuel savings and extended maintenance, **ORDER NOW!!!**
