

Start Our Exploration in

VMD 105

I was born in Zhongshan, China (a part of Guangdong province near Hong Kong). Before I moved to the United State, I have been living in China for about 20 years. I love my hometown, but I also enjoy living in San Francisco with my lovely family. Since I do not have much outstanding experiences of design, in order to gain inspiration, studying becomes necessary and the most direct way to me. Taking VMD 105 is my first step to achieve my design dream, and I will continue studying to sharpen professional skills by transferring to University. For me, school is a good place to obtain interpersonal skills such as skills in collaboration and communication. Whether a package designer or a public designer, these skills are necessary.

Adobe Photoshop

Family is the inspiration of my project. In order to echo the slogan "A place called home," the main characters of my assignment are my family members. I Especially like the laughing image of my mom and aunt even though it was not a good shot. I pretty like how they laugh since it gives me a sweet feeling--hapiness. I would say that the theme of my assignment is the most strong aspect. However, maybe my scene is too busy to eyes (I have insisted that's my style haha). I should also make the composition direction of this assignment stronger.

DON'T YOU WANT
TO GET IN PLAY WITH
US?

HAHAHAHAHAHA
HAHAHAHAHAHA
HAHAHAHA

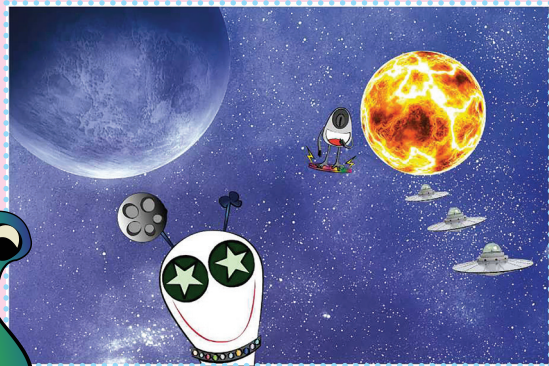

This is my first time to use Adobe Illustrator to create an artwork. At first, I was confusing when doing illustrator exercises in class, but after finished all the labs, I feel more confident when doing this assignment. In this assignment, I was using the Pen Tool mostly to create this picture of Aliens travel in space.

Final Assignment

Travel
in
Space
via
FLASH

My TBM assignment is a story about the future. I believe that there must be other “humans” live in the world we are living in. We don't see them because they are living far away from the earth. In the future, they will know the earth and become friends with us. Moreover, travel in space is not that hard and become common in that time. Even more exciting, we can travel in space with aliens. (Or maybe we shouldn't call them aliens?)
